

ERICH VON DANIKEN VISITS BOSNIAN PYRAMIDS

Without a doubt the most well-known researcher of the ancient mysteries of all time and writer of a best-selling books which sold upwards of 60 million copies, Swiss national Erich Von Daniken visited the Bosnian Pyramid of the Sun in Visoko, Bosnia-Herzegovina on April 28, 2014. Mr. Von Danichen's host was the discoverer of the Bosnian pyramids and director of the "Bosnian Pyramid of the Sun Archeological Park" Foundation Dr. Sam Osmanagich.

Daniken and Osmanagich spent approximately five hours together in visiting the sites of the Pyramid as well as the recently uncovered underground tunnel "Ravne".

Prior to his visit to Visoko, Daniken would write to Dr. Osmanagich about the public's curiosity of the recently uncovered Bosnian Pyramid of the Sun which he receives many questions on during his lectures at home and abroad. Keeping in mind that Daniken had never actually seen the Pyramid in person, there was naturally not much he could say about it. This would change after his visit to the site on April 28. In recent media events, Daniken has said:

"I am very, very impressed with this finding. Being in this line of work for coming on fifty years, I feel that I have a good sense of what is natural and what is artificially created. The tunnels and walls are without a doubt of artificial character. Furthermore, sections of the Bosnian Pyramid of the Sun are covered with concrete blocks."

I fail to understand the mentality of the government in Bosnia-Herzegovina in their choosing to not finance such an important finding.

Furthermore, I've come across many skeptics about the authenticity of the finding. They have made various comments, but none hold any real weight. What we really need are valid arguments. Some of the things that have been uncovered are simply undoubtable – from the discovery of the underground tunnels, to the geometry, design and orientation of the pyramid. These findings are comparable to those uncovered in other places around the world.

Professor Osmanagich is a pioneer in the truest sense of the word. People like him are the ones who have the capacity to change history as we currently know it. His opponents consist largely of hypocrites and those who simply lack knowledge on this subject.

I have never in my career come across a mystery of this magnitude (speaking on the pre-historic underground tunnels found beneath the pyramid."

Von Daniken's recent visit has prompted a number of world-leading archeologists to also come take a tour of the site. Among them will be Michael Tellinger, most known for his findings of megalithic circles in and around South Africa, Valery Uvarov, a Russian national known for his pyramid studies, Austrian Klaus Dona who has devoted his life to uncovering and studying ancient artifacts, and finally, Slovenian Marko Pogacnik, expert on megaliths and ley lines.

Tens of thousands of tourists plan on visiting the site of the Bosnian Pyramid of the Sun this year.

Zu allen Zeiten mussten die wahren
Forscher gegen Unwissenheit und Ignoranz
kämpfen. Das ist heute noch so.
Sowas braucht es zu den wahren
Forschern. Ich wünsche ihm viel Erfolg
gegen die Ignoranz!

Sehr herzlich!

Erich v. Däniken

28. April 2014
