

new field find. plow marks or deliberate ancient symbols

from Wayne May.

Jim, it looks like to me 20th century writing by John Deer written at different dates.
Any ideas? Difficult. Jim Leslie

Some of those marks look man made to me.

Scott Wolter

I would agree with Scott that these are man-made and not plow marks, which would seem more random and not stop at another line to make what appears to be runes. Also plow marks may have a more cleaner gouge face and no weathering or patina.

Jim & all:

To see similar glyphs, look at "Inscripcoes e Tradicoes da America Prehistorica especialmente do Brasil " by B. A. da Silva Ramos, Amazonas Manaus.

Regards,

Jay S Wakefield

Jay, these pre 20th century markings were written by Farmall tractors I have seen hundreds of them

rl

Hi Wayne and Jim,

By digitally increasing the contrast in the five photos, profiles of early sailing ships seem to appear. While art interpretations are in the mind of the viewer, the science of photomicrography and micro-erosion analysis might actually provide **relative dates** for the scratch marks.

Meanwhile, it would helpful to know:

- 1) How many different stone are there? (Photos Nos. 1 & 2 appear to be of the same stone.) Did you email photographs of both the **front and back** of each stone?
- 2) Where were the stones found (**State & County**)? Were they found in a plowed field or in a river bed? We they found together?
- 3) What are the dimensions of the stones? In archaeo-photogrammetry, a **metric scale** should **always** be included. Also recommend wetting down petroglyphs with water to increase surface contrast/reflection for photographs.

Regards,

Vance

As theories of its origin abound, what does future hold for Narragansett Rune Stone?

<http://www.providencejournal.com/breaking-news/content/20130706-as-theories-of-its-origin-abound-what-does-future-hold-for-narragansett-rune-stone.ece> ARTICLE DOES NOT WORK

Thanks Buzz for this. I had wondered what had happened to it other than someone stealing it.
Jim Leslie

Did Ancient Siberians Domesticate Horses Thousands of Years Ago?

We suspect that ancient Siberians brought their horses with them to the New World--thousands of years ago. Here's a clue....

<http://siberiantimes.com/science/casestudy/news/did-ancient-siberians-domesticate-horses-50000-years-ago/>

Best to all,
Buzz

"We suspect that ancient Siberians brought their horses with them to the New World--thousands of years ago. Here's a clue...."

The Russian scientist is talking about horses in Russia 40000 years BCE in the Altai region in Asia, not the New World.

Fw: sept./pyramids

hi jim:

would it be possible to send this out to the list ??? thanks in advance.....m

Subject: Fw: pyramids tour and conference

*I'm looking for akashic record readers, researchers, dowser and other that are call to participate in this event.

for help with air you can contact horst [n.y.c.] [631-757-6726](tel:631-757-6726)

additional tour detail can be found at www.bodymindspiritjourneys.com

Ogam advice and decodings asked for Gizeh , Great Pyramid , NC2 tombs and tunnels

FYI -

Hugo Kennes, Brussels, Belgium writes: I was a teacher and later a salesman in Information Technologies at Brussels; now retired and enjoying grand children. I made a website on remarkable academics and writers -

<http://users.telenet.be/kenneshugo/alternative%20history%20sciences.htm>.

Mainly interested in ancient metaphysical geometry worldwide, I came upon the work of Prof. Pistilli: Vikings in Americas. The Viking sites, Rune-Ogam-Irish Megalithic scripts in ancient Paraguay were so amazing that I decided to set up a website on it in order to inform researchers, hobbyists and the great public. Mega Dolmen, Menhirs and "Stonehenge"-like observatories in Paraguay and countries around may well generate a shift in our history books in the near future, certainly now in West Africa also many "Stonehenge" observatoria were discovered and Ogam in Cuba.

Any comments? send direct to Hugo or I can, Jim Leslie

Dear , like promised, info and fotos about Ogam at Gizeh , is now online at the website of author Richard Gabriel :

Cheops : <http://www.richardgabriel.info/NC2%20%20GP%20IMAGES.html>

NC2 tombs and tunnels : <http://www.richardgabriel.info/THE%20OGHAM.html>

I added on <http://www.richardgabriel.info/THE%20OGHAM.html> examples of translations in the Bask theory for Cheops ; for NC2 tunnels and caves examples also in latest Igbo theory

Qualifications and eventual translations in other theories from the members of Your Epigraphic Society in the USA are absolutely wellcom to recover ancient linguistic roots probably corresponding the OGAM script applied all around the Atlantic , like the Harappean Rongo-Rongo all around the Pacific. In Paraguay Ogam and Rongo Rongo are found together !!! (the Rongo-Rongo type in Paraguay is the same as on Eastern Island ! ; some Ogam types at Gizeh are the same as in North America, where it is found beside Lybian !!!)

Kindest regards Hugo Brussels

copy to author Richard Gabriel , website : <http://www.richardgabriel.info/index.html>

This link fwd by Kevin Callaghan - thanks!

http://www.newser.com/story/173033/mystery-people-beat-vikings-to-islands-by-500-years.html?utm_source=part&utm_medium=united&utm_campaign=rss_top

Celts or pre-Celts from Ireland/Scotland are certainly a possibility, but they might also have been Farley Mowat's *Farfarers*... "Albans" from central pre-Great Britain. Irish lore also speaks of Formorians from Africa sailing around the northern ends of Ireland and Scotland.

Jack Burgess

Is it possible that Vikings were there 300-500 years or more earlier, traded with the indigenous people there, set up a trading post of sorts, intermarried and absorbed the culture that was there previously, over time?

Eric Hanson

Must have been a slow news day at Newser.com, as this is **very** old "news," indeed.

A pre-viking Christian burial plot was excavated in the Faeroes in **1956** with a Celtic/British bronze ring pin. A palaeobotanical study published in **1983** demonstrated that oats were cultivated as early as 600-650 AD, i.e., in the later period of Irish Early Christian Atlantic voyaging (e.g., St. Brandon, c. 550 AD).

(See attachment for citations)

The Vikings did not get to Iceland until 809 AD, and the *LANDNAMABOK* (Land Taking Book) records how the Christian holy men who had been living there left as they did not wish to live next to pagans - reportedly in such haste that they left behind their (abbot's mass) bells, books and crosier!

Regards,

Vance

It seems so much archaeology news is really old news that's being cast as something brand new--for example, the Moai on Easter Island recent "discovery" that the great heads had bodies! Rutledge found that out in 1919; Heyerdahl again in 1957. Or that Ingstad discovered the Norse settlement in Newfoundland in 1960, something Mallory announced in his book in 1950. It's too much fun, I guess, to be the first or discover something "never before found." And so it goes.

Lee

I'm sure we can all speculate with some accuracy as to why this happens. Certainly, there's a great reluctance at times for archeologists or other university folks to acknowledge discoveries that run afoul of accepted wisdom. In a discussion with a major local expert here in Ohio, I said to him that since we know that Vikings were in Greenland at least 300 years, and they were great sailors—in need of wood for ships and other materials not readily available in Greenland—and since they were among the greatest sailors and explorers in history—wouldn't it be surprising if they didn't explore northern North America? His answer? "I don't know that they were in Greenland 300 years."

My understanding is that they went to Greenland at least by the late 900's (Erik the Red) and documents in the Vatican show correspondence with them from Rome until about 1300.

Anyway, according the Canadian researcher and writer, Mowat, the Albans were hunting "tuskers" across the N. Atlantic before the Vikings emerged there. As the game was overhunted and died out, the Albans continued on to N. America, by way of various islands. Other authors, Mallory, Fell, etc., drew a very plausible scenario in which Celts were hounded by Vikings across the N. Atlantic, through various islands, ultimately to N. America. But Mallory and Mowat have been largely ignored, while Fell, too popular in sales of his books to be ignored, has been dismissed and discredited by "experts" still clinging to the land bridge and seeing the oceans as uncrossable moats, as opposed to the conveyor belts they are.

Jack B.

It always seems good to recycle information and call it " new" ,maybe because there has to be "evidence" teased from the ground!

I'm just glad we don't have to rely on old news ,so to speak.

Thanks for the article non the less!

Crystal

Thank you, Crystal--I agree. For those of us who are still "virgins" or nearly that, we can use refresher courses. After all, most of us are not in the field...we are armchair types. But, of course, what we need are more non-trad field types right now, to counter the funded mainstreamers who can't seem to deviate from the textbooks. We all need to think beyond what we think is the "one truth". There isn't one. Too many fields, too many fronts, too much time lost. Nobody is going to get rich or famous in this search for the truth, unless they are out there with a shovel and an imagination (key word!!).

Patience, please, all of you veterans. We want to nurture a new generation of searchers!
